NOVA

ALUMINIUM GLASS PANELS

Meeting the demand to manage weight, durability, and innovative design concepts, Goldray Glass developed NOVA. This is where the rugged durability for everyday living intersects with sophistication and unquestioned beauty.

The NOVA panel system is designed with a lightweight aluminum honeycomb backer, creating a rigid, fire-resistant surface for decorative wall panels that stand out and stay put. This system is solid, sturdy, and is up for the challenge that any high-traffic space can throw its way. In Goldray's system offering, NOVA is often chosen in combination with CORNING® Gorilla® Glass, because when used together in typical high impact areas such as elevators and lobbies, the overall beauty and maintenance cost savings benefits are out of this world.

AS BEAUTIFUL AS THE STARS. AS TOUGH AS LIFE.

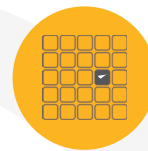

Easy to install and maintain, NOVA adds virtually zero weight to the finished product, making it a lightweight alternative that leaves a lasting impression.

Highly Durable
and Long-Lasting

Suitable for Interior
Applications

Countless Design
Opportunities

Self-Leveling

Ideal for Weight-
Sensitive Applications

Ideal for Areas with
Fire-Safety Concerns

Significantly Reduces
Installation Time

Demountable, Reusable,
and Relocatable
